Goods (Nice class & Statement)

- 9 (1) Downloadable computer software applications for enriching biological data with contextual information; linking biological data with information concerning biological sequence, structure, function, mechanism, pathways, assays, disease relevance, scientific evidence and scientific literature; identifying and analyzing biological patterns and relationships; tracing source records, data provenance, data lineage and the source and history of evidence records; recording research-program history and workflow decisions; identifying evidence gaps, conflicts and risk indicators across research programs; applying user-defined rules for data use, access and program boundaries; and making linked biological data and evidence available to artificial-intelligence and machine-learning models, large language models, artificial-intelligence software agents and scientific-research workflows, all in the foregoing fields.

Services (Nice class & Statement)

- 42 (1) Software as a service (SaaS) services featuring software for integrating, harmonizing, organizing, indexing, searching, retrieving, managing, and analyzing biological and life-sciences data and metadata, namely, genetic data, DNA, RNA and protein sequence data, structural biology data, assay and experimental data, multi-omics data, scientific publications and literature-derived data, evidence records, provenance information, and research-program records, for use in drug discovery and development, biologics discovery and development, and life-sciences research; software as a service (SaaS) services featuring software for enriching biological data with contextual information, identifying and analyzing biological patterns and relationships among sequence, structure, function, mechanism, pathway, assay, evidence, and scientific literature, and tracking provenance, data lineage, evidence lineage, and research-program history in the foregoing fields; platform as a service (PaaS) featuring computer software platforms for integrating biological and life-sciences data, metadata, analytical results, and evidence-linked biological context with laboratory information management systems, electronic laboratory notebooks, databases, data lakes, and data warehouses, cloud-computing platforms, artificial-intelligence and machine-learning models, artificial-intelligence agents, and scientific-research workflows.
