Feedback re: Canada Gazette, Part I, August 2020, Consultation on the Technical and Policy Framework for the 3650-4200 MHz Band and Changes to the Frequency Allocation of the 3500-3650 MHz Band, notice reference number (SLPB-002-20).

Dear sirs,

SPYR Network is a high-speed internet provider in rural Saskatchewan. As such, wireless technology as a delivery method is heavily relied on to deliver fast and affordable internet service to thousands of people. LTE-to-the-home via the WBS band is the main technology utilized by our network. It has standardized our network and allows us to deliver coverage in areas that were previously unreachable by traditional line-of-site technology. The WBS band is instrumental in providing reliable connectivity for families and businesses that previously had no option for rural high-speed internet. SPYR Network mainly provides service to the Tier 4-124 area. In the past, reliable internet service often ended right at the city limits. Families outside of major centres rely on the WBS band for the internet. It's changing how rural Saskatchewan is connected for the better.

Sincerely,

Zach Wilson
Chief Operating Officer
